

Elumicor was established in the year 2000, and was previously known as Legal XtraNet Inc.

As an eDiscovery entity, elumicor provides responsive, economical, and innovative knowledge management and technology tools for corporate enterprises. Our valuable technology resources constantly adapt to new challenges and client needs.

CoreView™ and CoreDynamics™ are the flagship software products that enable us to effectively serve corporate counsel. CoreDynamics™ is the processing engine that handles any request, large or small. CoreView™ provides a powerful document review environment, allowing for efficient tagging and review of data sets.

Elumicor owns and fully controls the technology at the heart of our eDiscovery services. Support from a strong engineering bench allows us to immediately respond to client requests for customization and remain ahead of the curve by continuously improving our technology. We offer a unique pricing model, and unrivaled customer service.

We are not all things to all people

- Elumicor's business model is corporate focused. We partner with select corporations and offer integrated services that provide responsive, economical, and innovative results while allowing our corporate partners to focus on their core competencies.

Customization

- Because of our unique business model, we offer customized features and services to best fit your needs. That may include fine-tuning project management parameters, as well as custom fields in CoreView™.

Unrivaled customer service

- Our clients have direct access to project managers who are intimately familiar with the client matter at hand.
- Our customer care program is focused on offering support any time it is needed to keep your team productive.

Data repositories

- Increase your efficiency by building repositories of data that you can use as many times as necessary.
- Review tagging remains intact.
- Data in the repository offers certifiable and defensible chain of custody attributes.

We foster a culture of innovation

- We were the first in the industry to offer data repositories.
- We were the first in the industry to offer automatic potentially privileged identification, with our very own AutoPriv™.
- Our focus on corporate clientele makes us unique.

Elumicor's Centralized Online Repository Review system, CoreView™, offers corporate legal departments and outside counsel a fast, efficient tool for meeting eDiscovery requests. With its customizable, intuitive interface, CoreView™ requires minimal training, allowing you to focus on review.

The de-duplication features of CoreView™ integrate both Equivio and Content Analyst to provide capabilities unmatched in the industry. CoreView™ can identify metadata duplicates, near duplicates, conceptual duplicates, and the last message in email threads. CoreView™ can accomplish this for electronic data, and it provides the same functionality for paper documents as well. This allows you to shrink the population of documents to be reviewed, and ultimately, to grow the bottom line.

As a full-service vendor staffed by experienced professionals, elumicor provides you with the confidence of fast, accurate results, freeing you to focus on your core competencies.

Task Management

CoreView™ includes the most advanced task management system in the industry. It allows project managers to assign documents to reviewers by folder, concept, equi-set, email set, and custodian.

- CoreView™ provides project managers with immediate access to the total documents per reviewer, the total pages assigned, the number of documents reviewed, the percentage reviewed, the number of assigned documents remaining to be reviewed, and the review basis.
- CoreView's™ task summary provides an up-to-date status of all reviewers for a project on a single screen.

Keyword, Concept, Field, Metadata, and Boolean Searching Capabilities

CoreView™ provides users with the ability to perform detailed queries using keywords, fields, metadata, concepts, and Boolean searches. This ensures that all relevant documents have been identified for review.

- Group conceptually related searches into categories and “clusters” of documents based upon their conceptual similarity to each other with a relevancy score assigned to the overall cluster.
- Specify examples of the items to be included in a search, and then “train” CoreView™ to recognize the items. In effect, instruct CoreView™ to “find documents like this one.”
- Create queries that use concept searches in conjunction with keywords and metadata.

Automatic Detection of Potentially-Privileged Information

CoreView™ includes AutoPriv™, a unique potentially-privileged identification engine. AutoPriv™ reduces risk, review time, and associated review costs. The privilege processor accurately identifies greater than 95% of privileged documents, and with minimal “training,” 100%. With AutoPriv™, privilege review can begin as soon as documents are loaded.

De-duplication

CoreView™ can reduce document review time by identifying the following types of duplicate documents both horizontally (over the entire document collection) and vertically (by custodian):

- Exact duplicates. These types of duplicates contain both identical metadata and identical content.
- Content duplicates. These types of duplicates contain identical content, but do not have identical metadata. e.g., identical Microsoft Word documents using different fonts.
- Near-duplicates. These types of duplicates contain a significant percentage of duplicate content (typically 65% or more, but this can be customized).

“As a software development company, we were impressed with both the level of integration and the seamless way in which Advanced Analytics was incorporated into elumicor's product suite. CoreView™ is certainly one of the best integrations we have seen.”

- Content Analyst Company

- Concept duplicates. These types of duplicates contain duplicate conceptual content, but may contain different wording and paragraph structure. i.e., linear text order makes no difference.

With CoreView™, you can tag any duplicate, and all duplicates will receive the same tag.

Comprehensive Security

CoreView™ provides comprehensive security features including:

- Document review history. All review changes are tracked and instantly available for inspection.
- Multi-level security and permissions for reviewers, project managers, administrators.

Document Review

CoreView™ has full-featured document review capabilities. For example, CoreView™ includes:

- Parent/Attachment review. Tag any document in a range and all documents receive the same tagging.
- Email message threading.
- Native file review.
- Batch review. Tag all documents in a folder at the same time.
- Static and dynamic folders.
- Complete redaction and annotation of documents.
- Unlimited number of custom issues and categories.
- Keyword and potentially-privileged hit highlighting.

“Elumicor’s review platform, CoreView™, sets a very high standard for integration with Equivio. Via elumicor’s innovative integration, reviewers can use the Equivio groupings to review, tag, and perform quality control, all in a seamless, intuitive manner.”

CEO**

Repositories

CoreView™ repositories offer significant savings, both in time and money, for discovery requests that involve the same electronically stored information (ESI) or subsets of that ESI. As each discovery request is processed, the ESI and tagging pertaining to that request is permanently maintained in the repository. CoreView™ repositories provide the following benefits:

- Reference any other related project in a repository and import documents with review tagging intact.
- Documents only have to be reviewed once; yet can be reused in as many discovery requests as needed.
- Documents are consistently reviewed and tagged from request to request.
- All documents in a repository offer certifiable and defensible chain of custody attributes.

Productions

The CoreView™ production process provides:

- Complete production history tracking. Reprint productions as needed.
- Electronic or printed production.
- Unlimited project size. No limits to the number of documents in a project.
- Triple protection from inadvertent production of potentially-privileged documents.

Reports

CoreView™ offers a robust selection of reports including privilege logs, review metrics, and redactions, as well as audit reports, catalog reports, and other related data.
